

## Environmentally relevant information about transfer coatings

Transfer coatings represent no hazardous materials due to the Ordinance on Hazardous Substances (11/2010). According to REACH they have to be classified as articles (1907/2006/EG) and therefore are not subject to registration. KURZ does not use any raw materials containing volatile halogen hydrocarbons or other commonly used ozone-damaging substances, cadmium, lead, mercury or hexavalent chromium for production.

The vast majority of our transfer products fulfill the requirements of the various national and international regulations, taking into consideration their formulations, the specifications provided by raw material suppliers and their usage in their respective specialized applications.

Some examples are:

- EU Packaging Directive 94/62/EC amended by (EU) 2018/852 and CONEG
- Restriction of Hazardous Substances Directive – RoHS (2011/65/EU including the Commission delegated Directive (EU) 2015/863)
- Restriction on bromine compounds (2003/11/EC)
- 2005/84/EC no phthalates
- 2006/122/EC no perfluorooctane sulfonates
- No CMR substances (materials that are carcinogenic, mutagenic or toxic for reproduction) that belong to the Category 1, 1A or 1B or to the hazard class Acute Toxicity (Category 1-3) according to the CLP Regulation (EC) No. 1272/2008 including its amending regulations
- None of the approval-requiring substances listed in Annex XIV of REACH in its version 11/2021
- No substances depleting the ozone layer. Stamping foils of KURZ fulfill the requirements of the Regulation (EC) No. 1005/2009 and are no products as described in Article 17 (export) of this regulation
- EuPIA's (European Printing Ink Association) raw materials exclusion list
- In the automotive area, the requirements of the End-of-Life Vehicles Directive of 2002 (2000/53/EC), which requires the individual components to be stored in the IMDS system to ensure traceability during vehicle disposal
- In the food sector (1935/2004/EC; 10/2011/EU) and the toy industry (2009/48/EC; EN71/3:2013), KURZ will provide assistance with external certifications for his qualities upon request
- The reclassification of titanium dioxide in Regulation (EU) 2020/217, which became effective on March 9, 2020, is not relevant for transfer products by KURZ

### Conflict minerals

In regard to requirements stipulated in the Dodd-Frank Act (Section 1502 – ‘Conflict Minerals’) and VO (EU) 2017/821 (supply chain due diligence for conflict minerals), KURZ continues to work with our suppliers to trace raw material content determining whether minerals from mines or uncertified melting plants located in conflict regions are utilized. No conflict minerals originating in the Democratic Republic of Congo and adjoining countries are intentionally used for the manufacturing of KURZ products. KURZ requests our suppliers to supply written confirmation of steps taken to prove the origin of material contents classified as conflict minerals.
